Formula basis (aligned with WAIMS-Python): Sleep 15pts (Watson 2020, Saw 2016) + Soreness 10pts + Mood 5pts + Fatigue 5pts + CMJ 15pts (Cormack 2008, Labban 2024) + RSI 10pts (Bishop 2023) + Schedule context 10pts + personal z-score modifier ±10pts.
ACWR: contextual flag only — not included in score. Impellizzeri et al. 2020 (BJSM) identified statistical coupling flaw; 2025 meta-analysis (22 cohort studies, I^2>75%) recommends 'use with caution as a tool'.
